Team Coruscantiens
Personalized notes from march 15th and 17th

Ria Chevli:

-Left to right running content (left aligned) is preferred
-Dropdown menus are not preferred by Jennifer
-They like icons for signifiers for vision, mission, values statement.
- The prefer left to right running text/information instead of dashboard look for ex: Mandalorians group home page was not preferred.
-A group came up with member recommendation content. It was impressive
-A group had a go back up arrow for mobile version. That was something which can make user experience easy.
-They do not like boxes, prefer different colour or lines to differentiate between content of the same page
-In general they love accordion format of content display.
-Theme colour(green for say) buttons like plus/minus/arrows stands out and makes easy for user's eye

Zhou Chen:

Like to see a list of available on the Career page. Like Simplifying the manual, love the extensibility of the job section. Like a long scrolling page. Keep the layout style to be consistent. Like red color in use. Keep the margin of text to be the same when expending the sections. Prefer no information stored on the web. Prefer the text justified to the left. The manual bar should be easy to understand and clean. Separate each section into one page by using some lines or other approaches. Like icons to make content nice and simple. Apply the organizing principle for the layout. Rather make the content bigger and readable on the home page(dashboard). shrink the height of the manual navigation bar. Like fixing the navigation bar. Do not need to scroll too much to find information.

Feras Daghmoush:
   ❖ Jennifer likes the header bar because we have added the social media icons.
   ❖ It is not something she likes to use a lot of boxes to get more space in the background.
   ❖ She recommended us to use only colors and text without using the outlines.

- ❖ To avoid getting busy on the user's eye try to pick one design feature and consistently using it until the end.
- ❖ Try to keep it simple.
- ❖ She is also glad that we moved the navigation bar as she recommended in the previous proposal.
- ❖ She likes the desktop version and would like us to similarly adjust the mobile version to have the navigation bar on top fixed while scrolling up and down.
- ❖ For the expansion of the text, we need to add a feature like accordion-style expansion or an Anker expansion style.
- ❖ The home page signifier is not important because users usually click on the logo of the page if they want to navigate to the homepage.

Jacob Chapman:
- Static information can be found through navigation
- Highlight events and careers on home page (wants this for mobile)
- Curious about arrows to go back
- Like the "go back to top" functionality
- Justified left text
- Aren't a fan of boxes on the pages
- Loves breaking up text with a horizontal line
- Breaking sections by using different a different shade of color
- Aren't sure about forms on site
- Loves accordion style
- Prefer expansion of accordion style across all pages
- Wants different colors for buttons that should pop
- Doesn't like dashboard display, rather have the vertical display
- Doesn't like scrolling within boxes
- Loves anchors
- English to French they love
